MSc IT Semester 2 - Database Management Systems (MSCIT-201)

Course Outcomes

CO1: Design a conceptual data model for a real-world domain

CO2: Write correct and efficient SQL for business queries

CO3: Normalize relations and justify design decisions

CO4: Explain transaction isolation and its anomalies

Unit 1: ER modelling

Unit 2: Relational algebra

Unit 3: SQL joins and subqueries

Unit 4: Normalization (1NF to BCNF)

Unit 5: Transactions and concurrency control

Unit 6: Indexing and query optimization
